

## NEW PRODUCT ANNOUNCEMENT

### AGATEC PL5 – 5 Beam Plumb, Level and Square Laser with Universal Mount

**Jacksonville, Arkansas, March 10, 2010 – Agatec Construction Lasers** introduces the PL5 - 5 Beam plumb, level and squaring laser with magnetic universal mounting bracket. The PL5 projects 5 beams – left, right, up, down and to the front; each at 90 degree angles from each other. The PL5 is designed for the contractor needing to plumb, level or square quickly and easily on the jobsite. Featuring a magnetically dampened compensator and a 4.5 degree leveling range, the PL5 is simple to set up and use. Simply turn the unit on and place over a reference point, the PL5 will automatically level itself and begin working. Should the unit be moved out of its level position, the laser beams will blink alerting the user and eliminating erroneous alignments.

The PL5 is accurate to 0.04" at 16ft and features a 100ft working range depending on lighting conditions. When not in use, the PL5's compensator is protected by a compensator lock that automatically engages when the unit is powered off. In addition to the magnetic mounting capability of the universal mount, the PL5's universal mount can be used with drywall track, attached directly to surfaces via the key hole mount and finally attached to any 5/8x11 thread. The PL5 can also be attached to any 1/4x20 standard tripod. The PL5 is powered by three AA batteries providing 18hrs of continuous use, and features an automatic shut off after one hour.

The PL5 comes complete with the PL5 Laser, Magnetic Universal Mount, Target Card, Batteries, Owner's Manual and Carrying Case. One Year **"Over the Counter"** Warranty.

AGATEC Construction Lasers is part of a global group of companies with engineering and production worldwide.
